In an effort to ensure that the response action for the Intercontinental Terminals Company (ITC) facility continues uninterrupted and transitions to a non-emergency status, EPA, with concurrence from TCEQ, issued ITC a one-time authorization for incident-related wastewater to be discharged through their wastewater treatment system on April 17, 2019. At the request of ITC, with concurrence from TCEQ, and pursuant to EPA's emergency response authorities, EPA is authorizing the treatment and discharge of the incident-related wastewater from Tank 80-34 through the on-site wastewater treatment system. This action will allow rain water collected in other operational areas outside of the response area to be treated and discharged through the facility's wastewater treatment system and not compound the problems associated with incident related wastewater storage.
